

**Table 11 . Immunization, Montana Adults with and without Disability, 2001 and 2003**  
(with 95% confidence intervals)

Had a flu vaccination (past 12 mo.) (adults age 65 and older)						
	Total No.	2001 %	CI	Total No.	2003 %	CI
All Adults	738	73.1	69.0-77.2	881	72.8	69.1-76.5
Adults with Disability	244	74.8	67.5-82.1	309	78.0	72.1-83.9
Adults without Disability	490	72.2	67.1-77.3	558	70.0	65.1-74.9
Ever had a pneumonia vaccination (adults age 65 and older)						
	Total No.	2001 %	CI	Total No.	2003 %	CI
All Adults	731	67.9	63.4-72.4	873	69.1	65.2-73.0
Adults with Disability	241	74.7	67.4-82.0	306	76.0	69.9-82.1
Adults without Disability	486	64.3	58.6-70.0	552	65.7	60.6-70.8

**Healthy People 2010 Objective(s):**

- 14-29a. Increase the proportion of adults who are vaccinated annually against influenza to 90 percent (age 65 and older).
- 14-29b. Increase the proportion of adults ever vaccinated against pneumococcal disease to 90 percent (age 65 and older).

Figure 13. Immunization rates among Montana adults age 65 and older – 2003

## (Age 65 and Older)

### During the past 12 months, have you had a flu shot?

Seventy-eight percent of adults with disability age 65 and older reported they had a flu shot in the past 12 months.

Adults with disability age 65 and older (78%) were significantly more likely to report immunization against flu than the same age group without disability (70%).

### Have you ever had a pneumonia shot?

Seventy-six percent of adults with disability age 65 and older reported they had ever received a pneumonia shot.

Adults with disability age 65 and older (76%) were significantly more likely to report immunization against pneumonia than their counterparts without disability (66%).
